DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1--9 are indefinite because no specific composition for the material is set forth. "An article characterized by physical properties alone and no specific composition is vague and indefinite". See *Ex parte Slob*, 157 USPQ 172.

Claims 1-9 are indefinite because Applicant has not defined what is the bottom limit and top limit are or how to calculate them. Please clarify.

Claims 7-9 are indefinite because "determining" has not been defined. How is it determined whether the ink is pressure-transferable? How is the top limit determined? How is the deformation energy measured?

Claim Rejections - 35 USC § 102

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Everhardus et al (US Patent 6,071,986).

Art Unit: 1755

Everhardus et al teach ink composition for a meltable ink comprising meltable base material, wherein the ink composition also comprises an amorphously setting monomer compound (amorphously solidifying softener) and an amorphous polymer or oligomer binder (semi-crystalline binder) and the base material is a crystalline-setting monomer compound (crystalline thickener) (abstract and col. 3 line 46-col. 4 line 22). It is the position of the Examiner that similar compositions with similar amounts would provide clear and convincing evidence that would lead one to conclude that the deformation energy of the ink composition would be the same as claimed by applicant. The composition as taught by Everhardus et al appears to anticipate the claimed invention.

Allowable Subject Matter

Claim 7 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action.

Claims 8-9 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: The references alone or in combination fail to teach a method of selecting a meltable ink set forth in claim 7.

Art Unit: 1755

Conclusion

The remaining references listed on forms 892 and 1449 have been reviewed by the Examiner and are considered to be cumulative to or less material than the prior art references relied upon in the above rejections.
